Hinge Upgrade kit for 2.6, and 2.3 meter Composite airframes

This kit is intended to be used with 35% and under composite air frames. Any kit using a 2mm(.079") diameter hinge pins can benefit from this upgrade kit.

Kit Contents:

- 13 Flanged Bearings (Stainless Steel Ball type)
- 1 hinge plate drill bit

Modification instructions are simply to use a pin vice to enlarge the hole in the phenolic hinge plate by hand. Deburr and press the flanged bearing into place. No further modifications are necessary. It is not necessary to widen the receiving slots in the flying surfaces to accept the width of bearing flanges.
